

Windblade Introduces the Inogen Aviator G3, Portable In-Flight Oxygen System

SOLVANG, CA – March 18th, 2013 - Windblade Corporation, the exclusive distributor of the Inogen Aviator in-flight pulse oxygen concentrator for the general aviation community, announces the Inogen Aviator G3 for immediate sale.

An extension of the existing Inogen Aviator product line, the G3 weighs only 4.8 pounds (2.2kg), almost 3 pounds (1.4kg) lighter than the Inogen One G2-1050. The Inogen Aviator G3 concentrates oxygen from ambient air and can be used by a single user up to 15,000'. The system is already in use by a wide range of pilots from kit planes to pressurized jets, and approved for use during all phases of a flight, including taxing, takeoff and landing, as well as for commercial airline use. The Inogen Aviator is safer than tank oxygen systems and meets FAA guidelines for supplemental oxygen, with no need to ever refill a bottle of oxygen.

Important Features:

- Lightweight and small
- Included battery that runs up to 2.5 hours
- Four (4) flow settings
- 12 – 32VDC power converter
- AC Power Supply 100-240V, 50-60Hz
- Meets FAA guidelines for supplemental oxygen
- Certified to FAA radiated emissions standards (May run in IFR)
- LCD user interface with continual self-diagnostics
- Three (3) year warranty

“The new, smaller size of the Inogen Aviator G3 means pilots can save even more weight and precious space in their aircraft,” says Thomas Laux, President of Windblade. “The G3 is ideal

for pilots who typically fly less than 15,000' and want to ensure they are well saturated with oxygen while flying. The G3 complements the Inogen Aviator G2-1050, which provides more output, allowing pilots to use the concentrator up to 17,999'."

The Inogen Aviator G3 includes one (1) nasal cannula (with spinner), one (1) black carrying case, one (1) DC mobile 12-32 VDC power supply, one (1) 12-cell battery (included in the base of the unit) and one (1) AC power supply.

The Inogen Aviator has been described as highly functional and was recognized at AirVenture 2011 as one of the "Best of Show" and "Hottest Prospects".

About Windblade Corporation:

Windblade is the exclusive distributor for the Inogen Aviator, supplemental oxygen solution for the general aviation industry. Windblade is comprised of multiple rated pilots with an extensive range of aviation background and experience, including designing and building kit planes.
